## Sunline Solar Pool Covers

Installing a Sunline Solar Pool Cover can save you more than money and debris in the pool. You'll be saving the sun's natural warmth, eliminate evaporation and reduce running costs in terms of maintenance and pool chemical consumption

A cost effective and convenient way to save water and heat your pool at the same time, solar pool covers are made from a film containing thousands of tiny bubbles which work together to collect and retain heat in your pool.

The sunline pool cover floats on top of the water (bubble side facing down) and allows solar energy to pass through - trapping and retaining the heat in your pool.

The sunline pool cover can warm your pool by up to 8 degrees and reduce heat loss by up to 75%, simply by reducing water evaporation
